

# Spiral Staircase and means of escape.

Langar hall is an exclusive Hotel and restaurant hidden away in the rural town of Langar on the outskirts of Nottingham. It prides itself on its Restaurant and offers a five star service. As part of the ethos of the business there are always on going building works and improvement / extensions to the main building and its out buildings. We were invited to help with the relocation of the Spiral Fire Escape from the first floor level at the rear of the property, as this became necessary as part of the new Bar extension. Radley Building managed the project and undertook all the major works, setting high standards in achieving a wonderful extension in keeping with the old building ambience.

We built a new steel fire escape with extended platform to align with the existing spiral staircase which we had to modify and relocate. The steelwork and existing staircase needed to be integrated into the new build and be visually pleasing aesthetically as a result.

The customer was very pleased with the overall results and invited all the trades involved to a project completion dinner at which the resident cloth's designer Paul Smith was present. This work led to us undertaking the refurbishment of the kitchen stainless steel furniture and work surfaces and we have worked here many times since.
