

# Electrical Busbar Enclosure

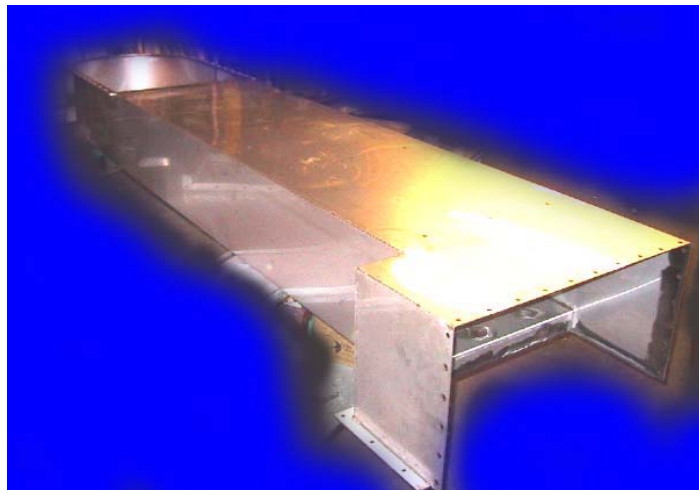

Collins Walker are specialists in manufacturing steam boilers, and we assist in the fabrication of parts whether in part or in whole. On this occasion we manufactured the Boiler de-

mister plate, and also Electrical Busbar Enclosure all from 316 L ( Low carbon) grade stainless steel. 2, 3, and 5mm plate was accurately detailed using AutoCAD, and then sent digitally to our Plasma flatbed profiling cutter to produce the shapes.

duce the shapes.

Rivet nuts and welded hank bush's were inserted into thread locations and flange plates were welded into position. The whole assembly was Tig welded into its formed shape, with all welds sanded and polished. The project was completed in three weeks from start to finish and dispatched on time.
